

## Anant D. Vyas, PE

Transportation Systems Engineer, Center for Transportation Research  
Energy Systems Division, Argonne National Laboratory, 362-G208  
9700 South Cass Avenue, ARGONNE, Illinois 60439

**Phone: (630) 252-7578 Fax: (630) 252-3443**

E-mail: avyas@anl.gov

**Capabilities:** Over 35 years of experience in modeling, technology and policy assessment, transportation demand analysis, urban transportation planning, and environmental analysis.

### Professional Experience:

#### **Argonne National Laboratory (1980 – Present)**

*Transportation Systems Engineer, Center for Transportation Research (1980-Present)*

Conducted research on transportation demand, market potentials of transportation technologies and materials, and environmental impacts of new technologies. Developed and exercised mathematical and simulation models for evaluation of technologies, alternative fuels, policies, and regulations. Analyzed the prospects for electric and hybrid electric vehicles and their impacts in terms of emissions and electricity demand nationwide and in selected urban areas. Analyzed energy and petroleum saving potentials of alternative vehicle engine and fuel technologies including electric and hybrid electric vehicles. Evaluated the impacts of the 1970 Clean Air Act on mobile source emissions for the U. S. Environmental Protection Agency. Participated as one of the two mobile source modelers in a five-year project assessing the impacts of mobile source emissions on acid precipitation in the United States. Developed a modeling system for projecting transportation energy demand and emissions. Used this modeling system to estimate transportation sector's contribution to acid rain precursors. Developed behavioral models for consumer vehicle choice and travel. Conducted technological and economic assessments of lightweight materials, structural ceramics, and alternative fuels. Evaluated the market potential for magnetically levitated vehicles and high-speed trains in key corridors.

#### **Chicago Area Transportation Study (1971 – 1980)**

*Director, Systems Simulation*

Managed all modeling, systems analysis, simulation, and software development activities. Directed the development of a set of travel demand and environmental impacts estimation procedures encompassing all steps of urban transportation planning. Managed the development of a unique two-stage mode choice model. Supervised the analysis of two home interview surveys, a commercial vehicle survey, and a cordon-line survey. Participated in the development of environmental implementation plans.

#### **Associated Cement Companies and Gujarat Electricity Board, India (1962 – 1969)**

*Systems Analyst (1967-1969), Electrical Engineer (1962-1967)*

Worked for a cement manufacturer as systems analyst conducting analysis of inventory and optimal use of manufacturing capacity. Supervised maintenance function as an electrical engineer. Worked for the Gujarat State Electricity Board as a rural electrification engineer.

### International Experience

Very familiar with the Indian Subcontinent and south Asia. Worked on an international project relating to the production of biomass energy in Nepal.

## Professional Activities

Author or co-author of over 100 publications or presentations. Member of the Transportation Research Board and its Freight Data Committee. Registered Professional Engineer of Illinois since 1975.

## Education

M.S. Industrial Engineering (Operations Research), West Virginia University (1971)  
 B.S. Electrical Engineering, Gujarat University, India (1962)

## Selected Publications
